

Michal Sagan

SOFTWARE ENGINEER

Profile

Experienced Software Engineer specializing in cloud-native integration platforms and API ecosystems. Strong expertise in Web Apps, Commerce, GraphQL Federation, CIAM, and secure service-to-service communication, with hands-on experience in Node.js, TypeScript, and Azure/AWS. Proven ability to translate complex business requirements into scalable, well-governed technical solutions while collaborating effectively across teams.

Employment History

Product Architect – Heineken

OCTOBER 2024

As a Program Architect at Heineken, I am responsible for defining and governing the target architecture for global digital commerce platforms across multiple OpCos. My role focuses on designing and scaling a federated GraphQL architecture, including subgraph ownership models, domain boundaries, and governance standards aligned with enterprise data and integration strategies. I lead architectural decision-making (KDDs/ADRs) around GraphQL Federation (Apollo / OSS alternatives), API composition, security patterns, and developer enablement – platform engineering, balancing speed of delivery with enterprise risk, compliance, and existing middleware ecosystems.

Additionally, I design CIAM and authentication flows (OAuth2, OIDC, PKCE, JWT, refresh tokens) and define service-to-service authorization patterns across Azure-based landscapes. I closely collaborate with product teams, domain architects, and platform engineers to ensure scalable, reusable, and well-governed integration solutions.

GRAPHQL FEDERATION | AZURE | NODE.JS | TYPESCRIPT | CIAM
API GOVERNANCE | CLOUD ARCHITECTURE | DEVELOPER ENABLEMENT

Software Architect & Developer – Schneider Electric

OCTOBER 2023

As a Software Architect in SE project, I am responsible for modeling the architecture of integrations with external applications, solution topology, and the security. Additionally, I develop TypeScript code for AWS Lambda with use of S3, DynamoDB, AWS EventBridge, as well as Builder.io plugins and components. I tackle various challenges related to builder.io (SAAS) limitations, implement web components (CAAS) and manage deployments of app code.

AWS | NODE JS | SVELTEKIT | GITHUB ACTIONS | WEB COMPONENTS | BUILDER.IO

Full-Stack Developer – Hunter Douglas USA

JANUARY 2022 – SEPTEMBER 2023

At Levolor.com, I played a key role in designing and delivering a custom migration tool, enabling a smooth transition from Magento 1 and multiple internal databases. I was responsible for integrating the SAP pricing engine and Order Management System (OMS), ensuring accurate pricing and reliable order processing. In addition, I focused on platform performance optimization and security hardening. In parallel, I contributed to the development and ongoing maintenance of a Progressive Web App built with Magento PWA Studio (React.js), delivering a modern, responsive frontend experience.

Adobe Commerce Architect & Developer – ABB

FEBRUARY 2021 – JULY 2022

At Accenture, I worked in a hybrid role combining Architect, Principal Software Engineer, and hands-on Developer responsibilities, contributing to the delivery and operation of the Adobe Commerce Cloud B2B platform for ABB in the United States and Spain. The role involved designing and managing integrations across a complex enterprise landscape, including MuleSoft, SAP, Salesforce, and Fastly, to ensure reliable data flow and process orchestration. We adopted a microfrontend architecture to improve modularity, scalability, and independent delivery of frontend components, supporting performance optimization at a global scale.

During the final seven months of the engagement, I contributed on a part-time basis.

Software Architect - Monogo

DECEMBER 2020 — JANUARY 2021

Prepared a proof of concept for an eCommerce platform using Adobe Experience Manager as the frontend, consuming Adobe Commerce APIs. The PoC successfully validated the proposed architecture and technical feasibility; however, the client ultimately decided to pursue a different strategic direction for the company.

AEM | ADOBE COMMERCE | SOFTWARE & SYSTEM ARCHITECTURE | REACT JS

Software Architect - JTI Geneva

MAY 2019 — NOVEMBER 2020

At the customer's HQ (Japanese Tobacco International), I led the design of the development environment and software architecture for a large-scale B2C eCommerce platform. The solution combined Adobe Experience Manager with a custom headless React.js frontend and Adobe Commerce. I worked closely with engineering teams from Adobe and BuzzBrothers, contributing to a multidisciplinary delivery setup. The project operated under Agile practices introduced to the organization through McKinsey-led training. In parallel, I supported global business users by delivering enablement and training sessions to ensure smooth adoption of the new platform. The engagement concluded with advanced Adobe AEM training to fully transition platform ownership to the internal teams.

AGILE | AEM | GIT FLOW | JIRA | CONFLUENCE | ADOBE COMMERCE | LINUX | REACT JS

Senior Backend Developer & Tech Lead - Monogo | JTI

NOVEMBER 2018 — APRIL 2019

Led international rollout initiatives for JTI, driving the expansion of a Magento 1 B2C platform across multiple markets, including Switzerland, Greece, Ireland, and Romania. The role involved country-specific customization of the platform, as well as integration with multiple payment gateways, age verification services, and Order Management Systems (OMS), ensuring compliance with local regulations and a consistent, high-quality user experience.

AGILE | AEM | GIT FLOW | JIRA | CONFLUENCE | ADOBE COMMERCE | LINUX | REACT JS

Senior Backend Developer - Britenet | Zenox

MARCH 2018 — OCTOBER 2018

Led the design and development of a PWA-oriented eCommerce solution based on Magento 2. The project covered large-scale data migration—including product catalogs, customer data, and transactional history—from multiple source systems such as SAP Hybris and Apache Solr. I was responsible for marketplace integrations, ensuring reliable data synchronization and performance at scale, as well as for designing and implementing a custom pricing engine capable of real-time market price monitoring to support competitive pricing strategies.

PHP | GIT | SYMFONY | JIRA | ANGULAR JS | MAGENTO 2 | COFFE SCRIPT | DOCKER | CI/CD | SAP HYBRIS | APACHE SOLR

Full-Stack Developer - LabSQL

FEBRUARY 2016 — FEBRUARY 2018

Designed and developed a responsive, API-driven commerce platform, focusing on performance, usability, and system integration.

JQUERY | JAVASCRIPT | PHP | BOOTSTRAP | SMARTY | SVN | APACHE SREVER | MYSQL

.Net Developer - Daro

SEPTEMBER 2015 — JANUARY 2016

ERP implementation and migration from a legacy system, covering the full lifecycle from discovery and planning through execution. The scope included designing and developing custom data migration tools (T-SQL, C#, MySQL), coordinating hardware upgrades, and delivering end-user training to ensure a smooth transition and operational readiness.

C# | .NET | MSSQL | MYSQL | ERP | OMS | GIT | LINUX | NGINX

Freelancer - Self-employment

SEPTEMBER 2004 — AUGUST 2016

As a self-employed professional, I led a team of experienced developers, delivering a broad portfolio of eCommerce solutions and CMS-driven platforms. I also founded and operated two successful eCommerce businesses, gaining hands-on experience across the full lifecycle—from product development and platform engineering to operations and growth. This role strengthened both my technical expertise and my capabilities in project delivery, stakeholder communication, and building long-term client relationships.
